RE: HB 2573 – Providing for study and investigation of maternal deaths by the secretary of health and environment.

The Kansas Affiliate of the American College of Nurse-Midwives (ACNM) represents Certified Nurse-Midwives (CNMs) in Kansas. We support HB 2573 as proposed by the American College of Obstetricians and Gynecologists (ACOG).

Certified Nurse-Midwives (CNMs), Obstetrician/Gynecologists (OB/GYNs), and family medicine physicians work collaboratively to provide care to the women of Kansas. Together, we are all interested in providing the safest care for pregnant women and new mothers and preventing poor pregnancy outcomes is one such way that we can provide this care.

“Maternal mortality surveillance is needed to identify and address the factors contributing to poor pregnancy outcomes for women. Though it requires an investment of time and resources, a structured death review process can be a powerful facilitator of state systems change to improve the health of women before, during and after pregnancy”.¹

With an established Maternal Mortality Review Committee, “teams composed of experts from a variety of disciplines work together to identify what happened and why”.² These teams, comprised of physicians, nurses, nurse-midwives, and other stakeholders would review psychosocial, clinical, and medical factors and propose interventions that could reduce the likelihood of a similar death occurring in the future. This is important for the health and safety of Kansan women.

Sincerely,

Board of Directors
Kansas Affiliate, American College of Nurse-Midwives
