Re: HB 2601

Dear Chairman Huebert,

We do not want any more vaccines for Kansas. We do not want the HPV vaccine in Kansas. HPV is not a threat to children in schools. You can get HPV by having vaginal, anal, or oral sex with someone who has the virus. It is most commonly spread during vaginal or anal sex. How does this affect my child's learning in school?

It would only be an issue if sexual contact or sexual behavior would be allowed during school hours or at school events. If sexual behavior would be allowed to happen you have many additional serious problems on your hands. So unless sexual activities are going to become part of the Kansas school curriculum there will be no need for an HPV mandate.

It is absurd to think that parents should not have a choice when something will be put directly into a child's body. I have a choice as an adult to consider my medical options while at the doctor and I should have that right as a parent to consider choices for my children. No matter what the vaccine is, as a parent it is my choice based on my beliefs and my relationship with our doctor. Not the big pharmaceutical companies and not some legislator taking monetary donations.

Kansas wants no more vaccine mandates!! Kansas families want the right to their religious beliefs as lined out in the First Amendment. Kansas families want their right to medical freedom and informed consent.

Say NO to additional vaccines! Say YES to supporting parents right!

Blessed,

Concerned Kansas Resident
Wichita, KS
